Listing of Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

- 1-28. (Canceled)
- 29. (Previously Presented) A dry method for finishing SOI substrates, said method comprising:

providing an SOI substrate comprising a cleaved surface, said cleaved surface having a first surface roughness value;

performing a hydrogen treatment to increase a concentration of hydrogen of said cleaved surface; and

performing an etchant and thermal treatment after the hydrogen treatment, the etchant and thermal treatment comprising:

____increasing a temperature of an environment associated with said cleaved surface to greater than about 1,000° Celsius; and

_____contacting said cleaved surface with a hydrogen bearing environment at least when said temperature of said environment is greater than about 1,000° Celsius to reduce said first surface roughness value by at least about eighty percent to a second surface roughness value, said hydrogen bearing environment including at least an HCl gas and a hydrogen gas;

whereupon the cleaved surface having the second roughness value is substantially planarized.

- 30. (Previously Presented) The method of claim 29 wherein the increasing the temperature is provided at a rate of about 10 Degrees Celsius per second and greater.
- 31. (Previously Presented) The method of claim 29 wherein said first surface roughness value is reduced by at least about ninety percent to the second roughness value.
- 32. (Previously Presented) The method of claim 29 wherein said HCl gas and said hydrogen gas are a ratio (HCl:H₂) of about 0.001 to 30.

- 33. (Previously Presented) The method of claim 29, wherein said hydrogen gas and the HCl gas interact with said cleaved surface to reduce said surface roughness value.
- 34. (Previously Presented) The method of claim 29 wherein said first surface roughness value of said cleaved surface is reduced in a thermal processing chamber.
- 35. (Previously Presented) The method of claim 29 wherein cleaved surface is provided by a controlled cleavage process.
- 36. (Previously Presented) The method of claim 29 wherein said SOI substrate is fabricated from a donor silicon wafer.
- 37. (Previously Presented) The method of claim 29 wherein said surface is raised to a temperature of at least about 1,000° Celsius.
- 38. (Previously Presented) The method of claim 29 wherein said environment is a process chamber wherein said substrate is provided.
- 39. (Previously Presented) The method of claim 29 wherein the environment is maintained at a pressure of about 1 atmosphere.
- 40. (Previously Presented) The method of claim 29 wherein said SOI substrate is a wafer whereon a plurality of fabrication processes are performed to define a plurality of transistors on said substantially planarized surface.
- 41. (Previously Presented) The method of claim 29, wherein said SOI substrate is a wafer having a main surface, said main surface being planarized in its entirety by said increasing a temperature and contacting steps, wherein a plurality of devices are fabricated on said planarized main surface.
- 42. (Previously Presented) A dry method for finishing SOI wafers, said method comprising:

providing an SOI wafer comprising a main surface that has been cleaved, said cleaved main surface having a first surface roughness value;

performing a hydrogen treatment to increase a hydrogen concentration of said cleaved main surface; and

performing an etchant and thermal treatment after the hydrogen treatment, the etchant and thermal treatment comprising:

_____increasing a temperature of an environment associated with said cleaved main surface to greater than about 1,000° Celsius; and

contacting said cleaved main surface with a hydrogen bearing environment at least when said temperature of said environment is greater than about 1,000° Celsius to reduce said first surface roughness value by at least about eighty percent to a second surface roughness value, said hydrogen bearing environment including at least an HCl gas and a hydrogen gas;

wherein the main surface is substantially planarized in its entirety to the second roughness value, the planarized main surface providing a surface whereon a plurality of devices are later defined.

- 43. (Previously Presented) The method of claim 29 wherein the hydrogen treatment increases the concentration of hydrogen of said cleaved surface to a range of 10^{21} and 5 x 10^{22} atoms/cm³.
- 44. (Previously Presented) The method of claim 29 wherein the hydrogen treatment comprises at least one of implantation, diffusion, or a combination of implantation and diffusion.
- 45. (Previously Presented) The method of claim 29 wherein said temperature of said environment is in the range of 1,000° Celsius and 1,200° Celsius.
